

**STATUS OF THE CLAIMS**

1. (Currently Amended) A method for detection of a variant Cayman ataxia ~~polypeptide~~ or nucleic acid sequence in a subject, comprising:

- a) providing a biological sample from a subject, wherein said biological sample comprises a Cayman ataxia nucleic acid; and
- b) detecting the presence or absence of a variant Cayman ataxia nucleic acid in said biological sample, wherein said variant is selected from the group consisting of ~~a variant encoding a serine to arginine substitution at amino acid 301 of SEQ ID NO:4, and a T to G substitution in the third base of intron 9 of SEQ ID NO:11~~ SEQ ID NOs: 8 and 10.

2-5. (Canceled)

6. (Previously presented) The method of claim 1, wherein the presence of said variant Cayman ataxia nucleic acid is indicative of Caymans ataxia in said subject.

7. (Previously presented) The method of claim 1, wherein the presence of said variant Cayman ataxia nucleic acid is indicative of said subject being a Cayman ataxia carrier.

8. (Currently amended) The method of claim 1, wherein the presence of said variant Cayman ataxia nucleic acid is indicative of ~~a disorder selected from the group consisting of ataxia, myoclonus, dystonia, epilepsy, and nystagmus~~ Cayman ataxia in said subject.

9. (Original) The method of claim 1, wherein said biological sample is selected from the group consisting of a blood sample, a tissue sample, a urine sample, a saliva sample, and an amniotic fluid sample.

10. (Original) The method of claim 1, wherein said subject is selected from the group consisting of an embryo, a fetus, a newborn animal, a young animal, and an adult animal.

11. (Original) The method of claim 10, wherein said animal is a human.

12. (Original) The method of claim 10, wherein said human is an adult female of child-bearing age.

13-14. (Canceled)

15. (Original) The method of claim 1, wherein said detection comprises a nucleic acid detection method selected from the group consisting of nucleic acid sequencing, polymerase chain reaction, hybridization, denaturing high pressure liquid chromatography, mass spectrometry, and enzymatic detection.

16-28. (Canceled)
